

ENTERPRISE PORTALS

BUSINESS OVERVIEW

Industry research indicates that most large enterprises have IT architectures made up of a random collection of departmental point solutions. These disparate IT applications are often built over time, using diverse technologies, variety of databases & communicating through a number of protocols. These need to be operated, maintained & enhanced to fulfil evolving business needs. They are extremely sensitive to changes & need skilled developers and operators for stability, resulting in significant development, integration & maintenance costs.

The co-existence of such applications create information silos, thus generating the need for a single point for information access to address security, compatibility & availability requirements.

Enterprise Portal is a framework for such a single point of content access, aggregating content & data from a variety of sources & locations. The portal also provides expanded functionality that incorporates many different applications & services, conveying contextual information in a timely & flexible manner.

DATAMATICS' NEXT-GENERATION SOLUTION

- Datamatics offers a holistic web experience management service that addresses the varied portal management requirements of organizations ranging from early stage companies to large organizations.
- Datamatics' enterprise portal services are based on user centered portal engineering (UCPE) methodology that helps build flexible, rich & ever-evolving web portal solutions.

SUCCESS STORY

A leading aviation company in India was facing the challenges common to a competitive industry that relies heavily on customer service & satisfaction. Their business decision makers needed access to up-to-date information about the organization as well as various departments. Datamatics created & deployed a MOSS based solution with AD & SSO integration. The solution offered role-based access for taxonomy, search, upload, edit, delete content functionality, version management, workflows & email integration.

As a result of this intelligent solution,

- Employees/departments collaboration improved by 50%
- Over 60% applications and processes were unified.
- Effective use of the portal grew by 300% allowing a wider segment of employees' access.
