

Technical Assessment and consultancy to provide a comprehensive elearning solution for a Global Learning Center of an International Organization focused on Women Empowerment agenda

Client's Business Need

- Develop a robust and innovative virtual campus, which would consolidate the client's training modules, knowledge products and services, assets of former institutions, and make them available to a wider audience.
- Develop and release 14 courses by end of 2013
- As a first step, conduct a technical assessment to identify all parameters and costs for the virtual campus initiative, technical aspects for the platform, technical expertise and maintenance required as well as the running costs
- Identify new learning approaches and outcomes to be launched on a cloud-based platform

Datamatics' Solution

As a Technical Consulting partner, Datamatics reviewed the client's virtual campus project goals, business needs, the client's ICT enterprise architecture, related and existing technical environment, and associated challenges and provided a solution that entailed the following:

- **Extensive Domain Research:** To research and analyze the learning management platform solutions in the market that suited the client's project goals, including the ones available on cloud and used by other International Organizations
- **Identified varied suitable options:** To present to the client's project steering committee and senior management
- **Expert Recommendation:** To provide value-added suggestions and final recommendation for the platform that best suited the client's organizational goals and needs
